

PROTOTYPE

DocShield AI — AI-assisted document authenticity screening

Prototype	Purpose
Functional web prototype	Pre-screen documents for potential non-authenticity, surface suspicious elements and provide a risk assessment for human review.

1. Live Demo

Application URL

<https://trust-doc-ai.vercel.app/>

The prototype provides a document-analysis workflow: upload a PDF, JPG or PNG, launch the analysis, then receive an authenticity pre-check with a risk score, localized anomalies and a recommendation. The interface explicitly presents the result as decision support rather than an expertise or proof.

2. Core Prototype Workflow

01	Upload	Upload a document in PDF, JPG or PNG format.
02	Analyze	Run the document analysis pipeline.
03	Risk Score	Return a risk assessment and document type.
04	Anomalies	Surface potentially suspicious elements or regions.
05	Recommendation	Provide a recommendation oriented toward human review.

3. GitHub / Technical Repository

GitHub: À ajouter avant la soumission finale. Le lien GitHub n’a pas été fourni, donc aucun dépôt n’est inventé dans ce livrable.

4. Prototype Screenshots

The following screenshots document the current web prototype and its main analysis states.

Screenshot 1 — Initial document-analysis interface

Screenshot 2 — Analysis result with risk score and recommendation

Screenshot 3 — Low-risk result with extracted information and anomaly status

5. What the Prototype Demonstrates

Capability	Prototype evidence
Document intake	The interface accepts PDF, JPG or PNG documents up to 10 MB.
Authenticity pre-check	The product is positioned as a pre-control of document authenticity.
Risk assessment	The interface displays a score out of 100 with a risk category.
Localized anomalies	The product surfaces potentially suspicious elements rather than only returning a binary decision.
Recommendation	The result includes a recommendation oriented toward human verification.
Explainability	The interface provides extracted information and suspicious-element status to support review.

6. Prototype Positioning

DocShield AI is presented as an AI-assisted screening tool rather than an automatic legal or expert authentication service. The interface frames the output as decision support and can recommend human verification when appropriate.

Submission checklist

- ☒ Live web prototype: <https://trust-doc-ai.vercel.app/>
- ☒ Screenshots of the current prototype included
- ☐ GitHub repository link — add before final submission
- ☐ Optional: short demo video / screen recording

Prepared as the Prototype deliverable for the SUM 72H Build Challenge.
